

This hands on video is designed for the newcomer to MountainTop's Expert Drafting Module.

In part one we will create and save a work environment that will be used to create a drawing in part two. The following topics will be discussed:

The Work Environment

Input devices, logging onto MountainTop, and manipulating windows will be introduced.

System Defaults

Tailor your system to your individual needs by modifying the system defaults. We will customize the function bars to add certain commands, manipulate graphic, text and dimension parameters, and assign a drawing library where your drawings will be stored.
